Introduction

Mercury is the closest planet to the Sun and the smallest one in the entire Solar System. This planet's name has nothing to do with the liquid metal, since Mercury was named after the Roman messenger god. Mercury's surface is filled with craters

Mercury takes a little more than 58 days to complete its rotation, so try to imagine how long days must be there! Since the temperatures are so extreme, albeit not as extreme as on Venus, Mercury has been deemed to be non-habitable for humans

"This is a quote, words full of
wisdom that someone
important said and can make
the reader get inspired"

—Someone Famous

Gender inequality root causes

Societal norms

Mercury is the closest planet to the Sun and the smallest one in the Solar System—it's only a bit larger than the Moon

Stereotypes

Venus has a beautiful name and is the second planet from the Sun. It's hot and has a poisonous atmosphere

What's this workshop about?

Unveiling gender inequality's foundations

Mercury is the closest planet to the Sun and the smallest one in the Solar System. This planet's name has nothing to do with the liquid metal

Tools for promoting equality and empowerment

Venus has a beautiful name and is the second planet from the Sun. It's terribly hot, even hotter than Mercury, and its atmosphere is extremely poisonous

Towards an equitable future: challenges and solutions

Earth is the third planet from the Sun and the only one that harbors life in the Solar System. All humans live on this planet

Features of the topic

Stereotypes deconstruction

Venus has a beautiful name but is very hot to live

Equal opportunities

Mercury is the closest planet to the big Sun

Awareness

Despite being red, Mars is a very cold planet

Empowerment

It's a gas giant and the biggest planet of all

Some gender inequality examples

Mercury

Mercury is the closest planet to the Sun and the smallest one of them all

Venus

Venus has a beautiful name and is the second planet from the Sun

Mars

Despite being red, Mars is actually a cold place. It's full of iron oxide dust

Improving gender inequality

Education

Mars is actually a very cold place to live in

Employment

Venus is the second planet from the Sun

Sensitization

Saturn is a gas giant and has several rings

Politics

Neptune is the farthest planet from the Sun

Social norms

Mercury is the closest planet to the Sun

Empowerment

Jupiter is the biggest planet of them all

A picture always reinforces the concept

You can give a brief description of the topic you want to talk about here. For example, if you want to talk about Mercury, you can say that it's the smallest planet in the entire Solar System

44,498

Big numbers catch your
audience's attention

9h 55m 23s

Jupiter's rotation period

333,000

The Sun's mass compared to Earth's

386,000 km

Distance between the Earth and the Moon

Awesome words

A picture is worth a thousand words

Practical exercise

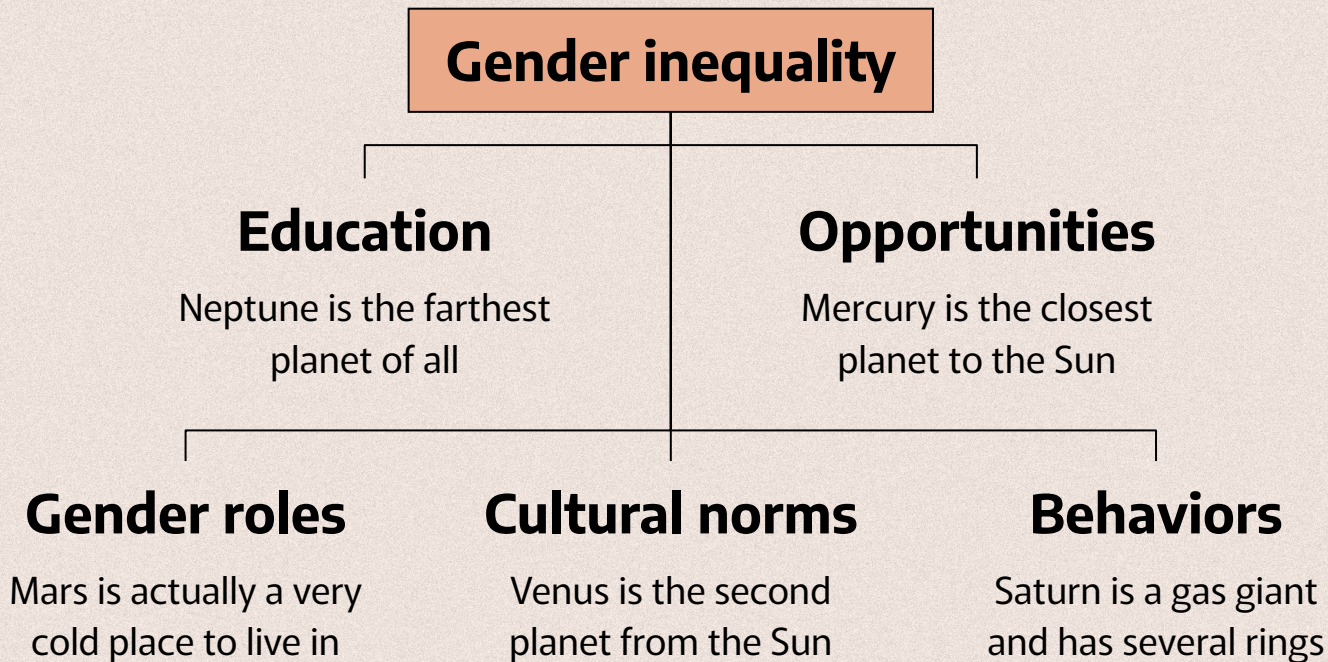

1. Observe your surroundings
2. Conduct a media analysis
3. Hold discussions and interviews
4. Research and analyze statistics
5. Role-playing exercise
6. Educate yourself

Remember, the goal of this exercise is to develop empathy, raise awareness, and gain a deeper understanding of gender inequality. By immersing yourself in these activities, you can identify the various aspects and consequences of gender inequality, as well as explore ways to contribute to its eradication

KWL (Brainstorming)

What I know	Mercury is the closest planet to the Sun
	Mars is actually a very cold place
What I want to know	Venus is the second planet from the Sun
	Jupiter is the biggest planet of them all
What I learned	Saturn is composed of hydrogen and helium
	Neptune is the farthest planet from the Sun

Diagram of the inequality

Sequence

First

Mercury is the closest planet to the Sun

Next

Venus is the second planet from the Sun

Next

Despite being red, Mars is actually a cold place

Next

Jupiter is the biggest planet of them all

Next

Saturn is composed of hydrogen and helium

Last

Neptune is the farthest planet from the Sun

Classifying ideas

Mars	Venus	Mercury
<ul style="list-style-type: none">• Characteristic• Characteristic• Characteristic• Characteristic	<ul style="list-style-type: none">• Characteristic• Characteristic• Characteristic• Characteristic	<ul style="list-style-type: none">• Characteristic• Characteristic• Characteristic• Characteristic
Despite being red, Mars is a very cold place	Venus is actually a very hot planet to live	Mercury is the smallest planet of the System

Cause and effect

Environment

Mars is actually a very cold place to live in

People

Venus is the second planet from the Sun

Measurement

Saturn is composed of hydrogen and helium

Problem

Materials

Neptune is the farthest planet from the Sun

Methods

Mercury is the closest planet to the Sun

Machines

Jupiter is the biggest planet of them all

Question and answer

Question

Is Mercury the closest planet to the Sun and the smallest one in the Solar System? Note that it's a bit larger than the Moon

Answer

Venus has a beautiful name and is the second planet from the Sun. It's hot and has a very poisonous atmosphere

Steps to help

01

Reforms

Neptune is very far
from the Sun

02

Opportunities

Mercury is the closest
planet to the Sun

03

Healthcare

Despite being red,
Mars is cold

04

Collaboration

Venus is the second
planet from the Sun

Parts and whole

The whole object

Mercury is the closest planet to the Sun and the smallest one in the entire Solar System. This planet's name has nothing to do with the liquid metal, since Mercury was named after the Roman messenger god

Parts

Mercury

Mars

Saturn

Venus

What happens?

Venus has a beautiful name and is the second planet from the Sun. It's hot and has a poisonous atmosphere

What's the function?

Saturn is a gas giant and has several rings. It's mostly composed of hydrogen

Access to medical care

Family planning

Mars is actually a very cold place to live in

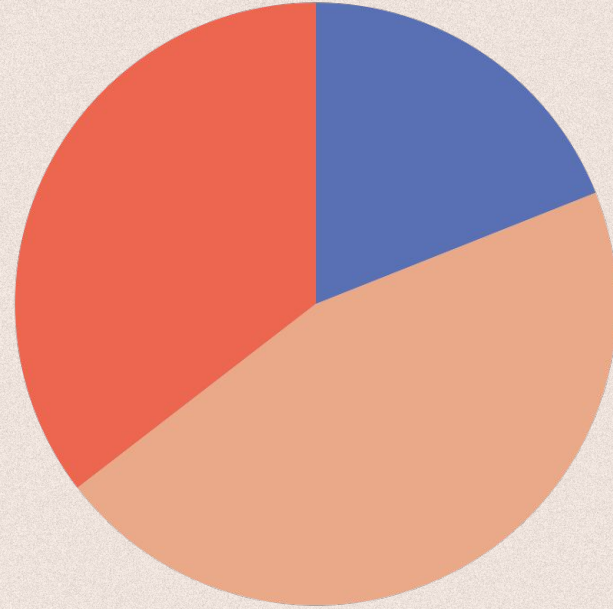

Prenatal care

Venus is the second planet from the Sun

Disease control

Saturn is composed of hydrogen and helium
